CSS

## PROJECTS

- **Webpage** – I created a law firm webpage for my portfolio (which can be found on my GitHub repository) for this web page I used WordPress, PHP, HTML, CSS, and Elementor. I created a local server, created the design, and built a custom WordPress theme that works with Elementor.
- **C# APP (Investmaths)** – I created this app using Visual Studio (which can be found on my GitHub repository) the app focuses on investments, as well as their returns. So It allows a user to enter a value they want to invest, over a certain period (months), at a certain percentage and it'll calculate the return for you. I used C# and a console design for the UI/UX
- **Android App (HookmeUp)** – This app focuses on hiring a service from another person through the and using the app to track the service, although I haven't finished the app. I worked on it alone from design UX/UI to the coding, using Java and Kotlin
